

SANOVA Capital

Third-Party Money Movement — Flow of Funds Diagram

Platform: <https://www.sanovacapital.com> | Settlement: **USDC on Base (chain ID 8453)** | Document date: **June 2026**

1. Intended use case

Sanova Capital operates a regulated marketplace where **KYC-approved investors** purchase **fractional shares** of tokenized real estate projects. Shares are represented as **ERC-4626 vault tokens** on the Base blockchain.

The platform acts as **merchant of record** for the investment transaction. Licensed **third-party payment providers** collect fiat or facilitate crypto on-ramp on our behalf. All on-chain investment settlement is denominated in **USDC on Base**.

Investor funds are used exclusively to:

- Settle the investor’s purchase of RWA vault shares
- Pay platform and advisor commissions (USDC, on-chain)
- Fund property SPV vaults that back the tokenized assets

Funds are **not** used for FX speculation, crypto trading, or unrelated third-party transfers.

2. High-level flow of funds

3. Post-settlement allocation (on-chain)

4. Treasury-first settlement policy

Policy: No RWA vault shares are issued until on-chain verification confirms USDC arrived at the Sanova treasury wallet (or a direct vault deposit for wallet-native USDC flows).

5. Currency exchange

Payment method	Incoming currency	Exchange to USDC?	Final settlement
Mercado Pago (Argentina)	ARS	Yes — via on-ramp partner	USDC on Base
dLocal / EBANX (LATAM)	BRL, MXN, local fiat	Yes	USDC on Base
Privy / Transak / Bridge (card)	USD / local fiat	Yes	USDC on Base
Ripio on-ramp	Local fiat	Yes	USDC on Base
Direct USDC wallet	USDC	No	USDC on Base

Sanova does **not** operate a currency exchange business. Conversion is performed solely by the licensed third-party on-ramp or payment provider. Sanova only accepts **USDC on Base** as final settlement.

6. Ultimate destination of funds

Step	Destination	Purpose
1 — Primary settlement	Sanova USDC Treasury Wallet on Base Env: BASE_STABLECOIN_TREASURY_ADDRESS	Central settlement; all fiat on-ramps deposit here
2 — Investment allocation	Property ERC-4626 vault (smart contract per SPV)	USDC backing the purchased real estate asset
3 — Investor receipt	Investor linked wallet on Base	ERC-4626 vault shares (fractional ownership)
4 — Commissions	Advisor / platform wallets on Base	USDC via CommissionRouter smart contract
5 — Dividends (ongoing)	Investor wallets	Property yield as USDC; optional loan auto-repay

Funds are NOT sent to:

- Personal accounts of Sanova employees
- Offshore unlinked accounts
- Unrelated third parties
- Crypto exchanges for trading or speculation

7. Example transaction (Mercado Pago — Argentina)

1. Investor purchases **USD 1,000** in vault shares (+ buyer fees ≈ USD 1,050 total).
2. Investor pays the ARS equivalent via Mercado Pago wallet balance.
3. On-ramp converts to approximately **1,050 USDC** delivered to Sanova treasury on Base.
4. Platform verifies the on-chain transaction and confirms the purchase.
5. ~1,000 USDC allocated to the property vault; ~50 USDC commissions to advisors/platform.
6. Investor receives ERC-4626 vault shares in their linked wallet.

8. Compliance controls

- **KYC** Identity verification required before purchase
- **Routing** Payment methods shown by investor country
- **Asset** Single on-chain settlement asset: USDC on Base
- **Audit** Payment intents, provider IDs, and treasury tx hashes stored
- **Webhooks** Provider notifications reconciled against on-chain receipts
