

SANOVA Capital

Third-Party Money Movement — Flow of Funds (Bridge)

Entity / Platform: **Sanova Capital** · <https://www.sanovacapital.com>

Legal wrapper: **Fideicomiso Sanova Global RWA · SANOVA GLOBAL S.A.S. (Argentina)**

Settlement asset: **USDC on Base (chain ID 8453)** | Document date: **July 2026** | Prepared for: **Bridge.xyz compliance review**

1. Intended use-case

Sanova Capital is a marketplace where **KYC-approved investors** purchase **fractional ownership** of tokenized real-estate projects (Real-World Assets). Ownership is represented as **ERC-4626 vault shares** on the Base blockchain.

Bridge is used as a licensed third-party money-movement / on-ramp provider so that investors can fund purchases with **USD (ACH, wire, or card)**. Bridge converts those funds to **USDC on Base** and delivers them to Sanova's designated treasury wallet. Sanova then allocates USDC into the corresponding property vault and mints vault shares to the investor.

Investor funds received via Bridge are used **only** to:

- Settle the investor's purchase of RWA vault shares
- Allocate USDC into the property SPV vault that backs the asset
- Pay platform / advisor commissions on-chain in USDC

Funds are **not** used for FX speculation, crypto trading, peer-to-peer transfers, or unrelated third-party payouts.

2. Direct answers for Bridge review

Will received funds be exchanged for another currency?

Yes. Investor USD (or local fiat collected through Bridge) is converted by **Bridge** into **USDC**. Sanova does **not** operate an FX desk; Bridge performs the conversion. Final settlement asset accepted by Sanova is always **USDC on Base**.

Where will funds ultimately be sent?

- 1) Primary destination: **Sanova USDC Treasury wallet on Base** (0xa993743CFB85E8d6481Ef60bb3D397F49604A592)
- 2) Then allocated on-chain to the **property ERC-4626 vault** (SPV compartment)
- 3) Investor receives **vault shares** in their linked Base wallet
- 4) A small fee portion (~3–5%) goes to **platform / advisor commission wallets** on Base

3. Bridge flow of funds diagram

End-to-end money movement via Bridge

4. Bridge product surfaces used

Virtual Accounts (ACH / Wire)

Investor receives bank deposit instructions.
Source currency: **USD**. Destination configured as: **USDC on Base** → Sanova treasury address.

On-ramp (Card / hosted)

Investor pays by card (or Bridge-hosted on-ramp). Bridge delivers **USDC on Base** to the same treasury destination.

5. Currency exchange detail

Leg	Asset / currency	Who holds / moves it	Exchanged?
Investor payment	USD (ACH / wire / card)	Bridge collects from investor	—
Conversion	USD → USDC	Bridge (licensed TPP)	Yes
Delivery to Sanova	USDC on Base	Bridge → Sanova treasury wallet	No further FX
Investment allocation	USDC on Base	Treasury → property vault + commissions	No
Investor receipt	ERC-4626 vault shares	Minted to investor Base wallet	N/A (not a currency)

Policy: Sanova is merchant of record for the investment. Sanova does not exchange currencies. Only Bridge (or other licensed on-ramps) perform fiat ↔ USDC conversion. No RWA shares are issued until USDC is verified on-chain at the Sanova treasury.

6. Ultimate destinations (summary)

Order	Destination	Purpose
1	Sanova USDC Treasury on Base 0xa993743CFB85E8d6481Ef60bb3D397F49604A592	Primary settlement address configured as Bridge destination
2	Property ERC-4626 vault (per project SPV / Compartimento)	~95–97% of net proceeds backing the real-estate asset
3	Investor linked wallet (Base)	Receives vault shares representing fractional ownership
4	Platform / advisor wallets (Base)	~3–5% commissions in USDC

Funds are NOT sent to

- Personal bank accounts of Sanova employees
- Unrelated third parties or offshore unlinked accounts
- Crypto exchanges for trading or speculation

- Any destination other than Sanova-controlled Base wallets / vaults described above

7. Example transaction

1. Investor buys **USD 1,000** of vault shares (+ fees ≈ **USD 1,050**).
2. Investor pays **USD 1,050** via Bridge (ACH, wire, or card).
3. Bridge converts to ~**1,050 USDC** and sends them to the Sanova treasury on Base.
4. Sanova verifies the on-chain receipt, then allocates ~1,000 USDC to the property vault and ~50 USDC to commissions.
5. Investor receives ERC-4626 vault shares in their linked wallet.

8. Compliance controls

- Investor **KYC** required (Didit) before purchase / Bridge funding
- Single settlement asset: **USDC on Base**
- **Treasury-first**: shares minted only after on-chain USDC verification
- Bridge webhooks reconciled against treasury transaction hashes
- Payment intents, Bridge customer / transfer IDs, and tx hashes retained for audit
